

## Configuring NT4 for Dial Up

These steps will take you through setting up your computer to dial to **Kinect** on NT 4.

### Step 1

Open **My Computer -> Dial-up Networking**  
Click **New**

### Step 2

In Name the new Phone Entry type **Kinect**  
Click **Next**

### Step 3

Tick **I am calling the Internet**

Tick **Send my plain text password...**

Untick **The non-Windows NT server...**

Click **Next**

**Server**

Check all that apply:

- I am calling the Internet.
- Send my plain text password if that's the only way to connect.
- The non-Windows NT server I am calling expects me to type login information after connecting, or to know TCP/IP addresses before dialing.

< Back   Next >   Cancel

### Step 4

For the Phone number type **0867 77770**

Untick **use telephony dialing properties**

**Phone Number**

Enter the phone number of the dial-up server you are calling. Alternate phone numbers, if any, are dialed automatically if the primary phone number cannot be reached. They may also be used to set different numbers on individual multi-linked ISDN lines.

Phone number:  
0867 77770

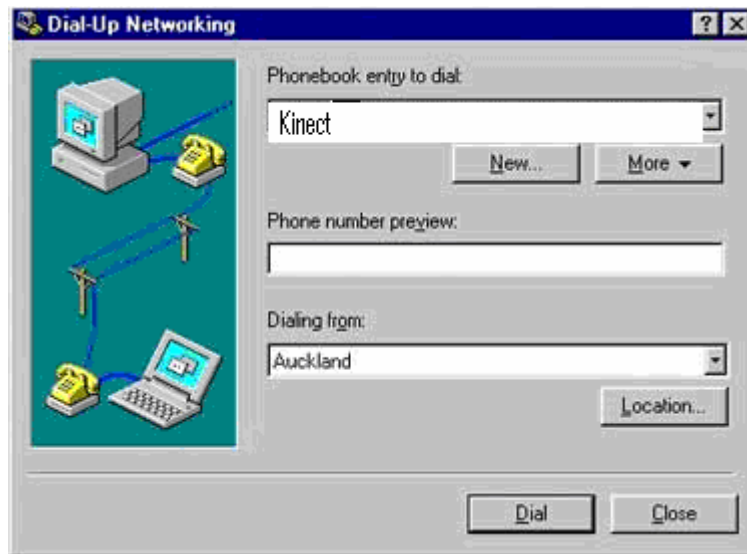

Alternates...

Use Telephony dialing properties

< Back   Next >   Cancel

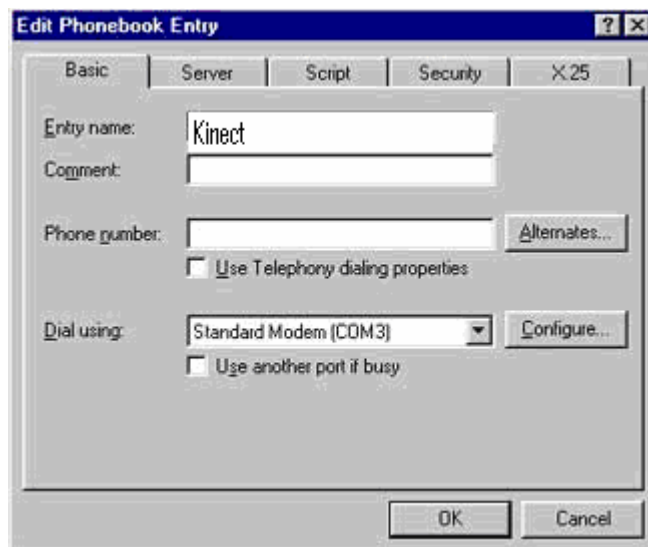

### Step 5

You will be returned to the initial screen. Click **More** -> **Edit entry and modem properties**

### Step 6

Click **Configure** beside your modem name

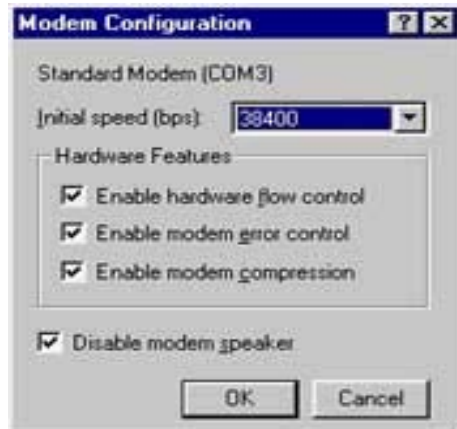

## Step 7

Make sure the Initial Speed (bps) is set to **115200**

Leave all other options **Ticked**

Click **OK**

## Step 8

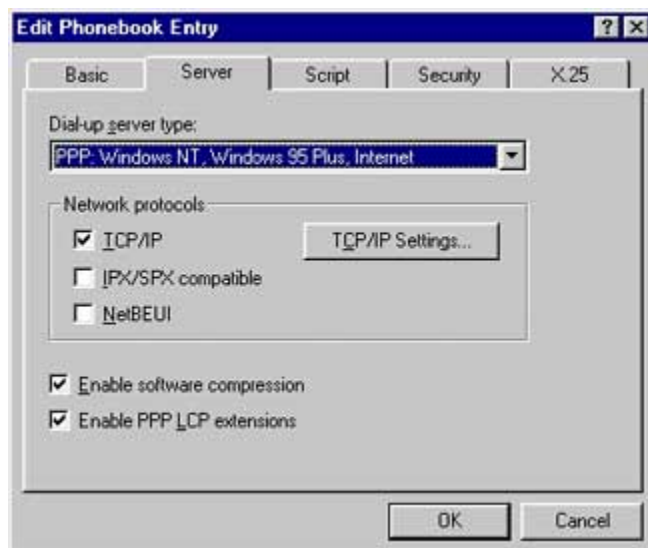

Click the **Server** tab

Dial-up server type: **PPP: Windows NT...**

Network Protocols: Only TCP/IP **ticked**

Enable Software Compression: **Ticked**

Enable PPP LCP extensions: **Ticked**

## **Step 9**

Click the **Script** tab

**None** should be selected

Click **OK**
